

William R. DeHaven
5927 106th Ave. Ct. East
Puyallup, WA 98372-5866

My most recent work experience is as an RF / Analog design engineer (Electrical Engineer II) with SAIC's Intelligence, Surveillance, and Reconnaissance Group. I have three years experience in that position. I achieved the promotion to Electrical Engineer II at SAIC from an engineering technician position by many hours of self-study on my own time.

My degree is in physics (1997) but my understanding of science is broad and varied as I have an insatiable appetite for scientific knowledge. My engineering skills are enhanced by more than 40 years experience in the troubleshooting and repair of complex electronic systems.

I am also a people person with excellent communication, inter-personal, and customer service skills gained through many years of dealing directly with the public as the manager of an avionics sales and repair facility.

Although I held an RF engineering position with SAIC, I would be happy to accept a position as an engineering technician or an electronics repair technician with a stable company where I could serve in that capacity for several years. I thoroughly enjoy and excel at the troubleshooting and repair of complex electronic systems. My electronics experience spans many generations of electronics technology development so I am comfortable troubleshooting everything from tube type audio and RF to the latest uC controlled devices.

I am currently living in the south Puget Sound region and would consider work somewhere near Seattle, but would prefer to relocate to the Phoenix area. If necessary, I have the resources to relocate if no company relocation resources are available.

I am excited about the opportunity to talk with you to discuss how my skills could help your company achieve its goals.

I may be contacted by phone at:
